

Filling valve, pneumatically operated, Series NL1-SSV

- adjustable filling time
- Compressed air connection G 1/4
- Pipe connection
- suitable for ATEX

Type Poppet valve, Can be assembled into

Sealing principle Soft sealing
Certificates suitable for ATEX

Working pressure min./max. 0 ... 16 bar

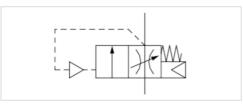

Control pressure min./max. 2,5 ... 16 bar

Ambient temperature min./max. -10 ... 60 °C

Medium temperature min./max. -10 ... 60 °C

ledium Compressed air Neutral gases

 $\begin{array}{ll} \text{Max. particle size} & 5 \ \mu\text{m} \\ \text{Weight} & 0,43 \ \text{kg} \end{array}$

Technical data

Part No.	Port	Flow	
		Qn	
0821300774	G 1/4	2200 l/min	

Nominal flow Qn with secondary pressure p2 = 6 bar at Δp = 1 bar Suitable for use in Ex zones 1, 2, 21, 22.

Technical information

The pressure dew point must be at least 15 °C under ambient and medium temperature and may not exceed 3 °C .

The filling valve builds up pressure slowly in the pneumatic systems, i.e. prevents a sudden pressure build-up during a recommissioning after a mains pressure failure or avoids emergency OFF switching. This allows dangerous abrupt cylinder motions to be avoided.

Do not position filling valves or filling units upstream of open consumers, such as nozzles, air barriers, air curtains, since these may prevent through connection of components.

Suitable for use in Ex zones 1, 2, 21, 22.

A change in the flow direction (from air supply on the left to air supply on the right) occurs by rotating installation by 180° about the vertical axis. Please see the operating instructions for further details.

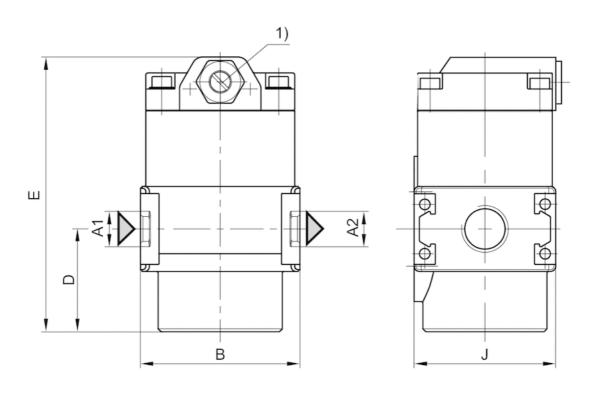

Technical information

Material				
Housing	Die cast zinc			
Front plate	Acrylonitrile butadiene styrene			
Seals	Acrylonitrile butadiene rubber			
Threaded bushing	Die cast zinc			

Dimensions

Dimensions

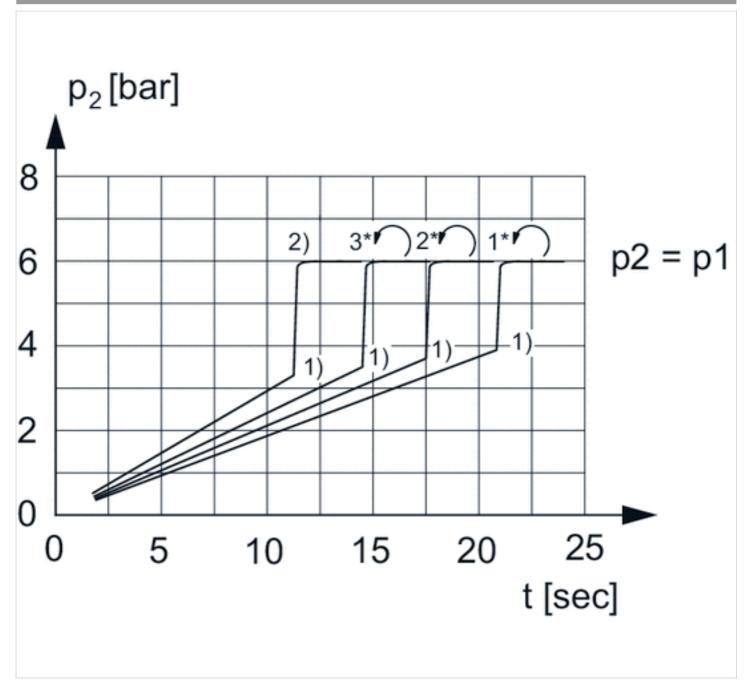

1) Adjustment screw for filling time

Dimensions in mm

A1	A2	В	D	Е	J
G 1/4	G 1/4	45	29	77.5	40

Diagrams

Secondary pressure while filling

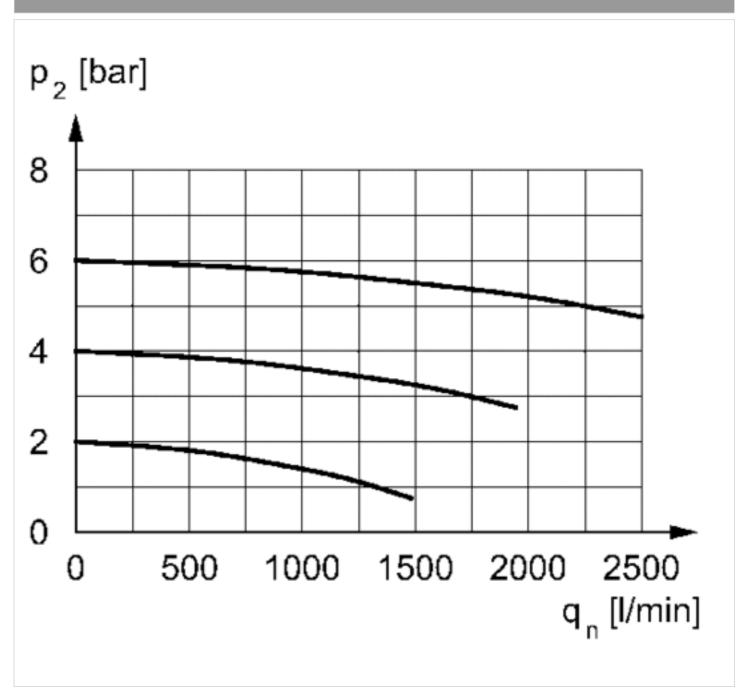

- p1 = working pressure
- p2 = secondary pressure
- t = filling time, adjustable via adjustment screw (throttle)
- 1) Switching point: adjustable filling time, fixed change-over pressure $\approx 0.5 \text{ x p1}$ (50%)
- 2) Throttle fully opened

* Adjustment screw rotations

Flow rate characteristic

p2 = secondary pressure qn = nominal flow
